LOVINDER PNAG

let's talk about me

I am a web developer. I make web apps that are useful, awesome, and natural. I get excited about using the best tool for the job. I believe good designs runs through the whole apps, that clear, descriptive variable names are just as important as choosing the right font.

I am not just a web developer. I can juggle, love philosophy, and love volunteering. In a past life, I was a Peptide Chemist. I am addicted to politics and reading about the economy. I've been known to make a pretty outstanding omelet. I am really good at sarcasm.

I graduated from Dev Bootcamp. I started programming before Dev Bootcamp, but I learned more in those nine weeks than I've ever learned in any other nine-week chunk of my life. At Dev Bootcamp, I learned how to learn new things really quickly. I learned to take pride in writing elegant, clear, tested code.

I learned to love JavaScript. Although Ruby is the computer language I know best, JavaScript is the language I know second best. I was curious about the difference between the two languages and learned to get used to how the language is dynamic, light, and how there are a lot of

libraries so you don't need to reinvent the wheel every time. I have done some practice and learning with Java as well, but have much more to learn along that fork in the road.

let's talk about Asana

You care about your craft. I've seen the way you work and how you work. You build great products, but what's more impressive to me is the way that you build them. You build things right. You inspire each other to keep learning, and you contribute back to the community. I want to work with people who love and respect the craft of software engineering like you do.

You like each other. When I first heard about Asana, the thing that impressed me most was you work smart and you work hard. Your not just coworkers you are a culture. You make each other better programmers. You have a culture of learning new things and sharing those things with each other. That's important to me, and I want to be a part of that.

You have high standards. I don't know if you hire people out of Dev Bootcamp. I've been doing software programming close to 2 years. It was actually a a newspaper article that got me started on this path. However, I am up for a challenge. I learn really quickly. I don't need to have my hand held along the way. A little support from you guys, and I'll get up to speed faster than you expect. I know this because...

I have high standards. Before Dev Bootcamp, I worked harder than anyone else in my cohort to learn as much as I could. I was someone that people came to for help, and I stayed late to work many nights, I insisted on testing when others on my team wanted to skip it. I want to be one of the best developers out there and learning from you at Asana is the best way to get started down that road. I'll put in the extra work.
